

LIVE COOK

GHB and Meth

DATE:
Thursday, June 24, 2010
0900 - 1700 Hours

DEA chemists will do an actual cook of methamphetamine from pseudoephedrine using the hydriodic acid reduction method with iodine and red phosphorous. GHB will be manufactured from GBL and sodium hydroxide. We will have attendees under the direction of chemists actually do the hands on cooking for those that want to "mix" the chemicals. We will also have a cook of methamphetamine from pseudoephedrine using the ammonia / metal reduction method. This training is a great opportunity to interact with the chemists and ask anything and everything about the manufacture of Meth and GHB.

INSTRUCTORS:
San Diego Drug Enforcement Administration Chemists

LOCATION:
San Diego DEA Bldg
Vista, CA
